PLANT 2 · SAFETY PROCEDURE

Lockout/Tagout

SP-402
Rev D

Effective	Owner	Prepared by	Approved by
2025-03-03	**Safety**	**T. Greene**	**D. Whitfield**

PURPOSE

Make sure no machine can start or release stored energy while someone is working inside it.

SCOPE

All servicing, cleaning and jam clearing that puts any part of the body inside a guard, on any equipment at Plant 2.

ROLES

ROLE	RESPONSIBILITY
Authorized Employee	Applies their own lock and tag. Operators and Maintenance Technicians who are trained and listed.
Line Lead	Makes sure everyone affected knows the machine is locked out.
Safety Manager	Audits this procedure every year.

PPE

- Safety glasses
- Safety shoes

TOOLS

- Personal padlock (one key)
- Lockout hasp
- Danger tag
- Valve lockout device
- Voltage tester

MATERIALS

None.

PROCEDURE

Applying

STEP	WHO	ACTION
1	Authorized Employee	Tell the Line Lead and the operators which machine is being locked out.
2	Authorized Employee	Stop the machine with its normal stop button.

3	Authorized Employee	Switch off and lock the electrical disconnect. Close and lock the compressed air isolation valve. Bleed the air.
4	Authorized Employee	Case packers: also wait for the glue tank to cool below 60 degrees C or keep the tank lid closed and tagged.
5	Authorized Employee	One person, one lock, one key. Each person working on the machine applies their own lock to the hasp.
6	Authorized Employee	Try to start the machine. Confirm nothing moves. Test for voltage where electrical work is planned.

Removing

STEP	WHO	ACTION
7	Authorized Employee	Tools out, guards back, everyone clear.
8	Authorized Employee	Each person removes only their own lock. A lock left on at shift change stays until its owner removes it or the Safety Manager authorises removal.
9	Authorized Employee	Tell the Line Lead the machine is ready to start.
