Labeler Setup and Label Roll Change

WI-212
Rev D

Effective	Owner	Prepared by	Approved by
2025-09-08	**Production**	**M. Alvarez**	**D. Whitfield**

PURPOSE

Apply labels straight, wrinkle-free and in the right place, and change rolls without a line stop.

SCOPE

LAB-1, LAB-2 and LAB-3 pressure-sensitive labelers.

ROLES

ROLE	RESPONSIBILITY
Operator	Sets up the labeler and changes rolls.
Line Lead	Decides whether to stop the line for repeated jams.
Maintenance Technician	Adjusts sensors and replaces rollers.

PPE

- Safety glasses
- Safety shoes

TOOLS

- Splice tape
- Scissors
- Lint-free wipes
- Isopropyl alcohol

MATERIALS

- Labels

PROCEDURE

Setup

STEP	WHO	ACTION
1	Operator	Use only label rolls with a green QA release sticker (see QP-308). Rolls from a supplier not listed in QP-309 are not to be loaded.
2	Operator	Check the label matches the product and the artwork revision on the schedule.
3	Operator	Thread the web as shown on the diagram inside the labeler door.

4	Operator	Set web tension to mark 4 on the dancer arm. Set the gap sensor so it reads the gap between labels, not the label edge.
5	Operator	Clean the peel plate and the drive roller with isopropyl alcohol at every roll change.

Roll change

STEP	WHO	ACTION
6	Operator	Prepare the new roll on the spare spindle before the old roll runs out.
7	Operator	Splice the new roll to the old one as described in WI-215.
8	Operator	Write the roll number, supplier and lot on FRM-PR-12 Label Roll Log.

Jams and web breaks

STEP	WHO	ACTION
9	Operator	First jam: clear, re-thread, restart.
10	Operator	Three jams or web breaks in one hour: tell the Line Lead. Put the roll aside with a hold tag as described in QP-315 and load a roll from a different lot.
11	Line Lead	If jams continue on a second lot, call the Maintenance Technician and the QA Technician.
